## EXPERIMENT- 05

Student Name: DIVYANSH

UID: 23BCS11778

Branch: BE-CSE

Section/Group: KRG 1(A)

Semester: 05

Date of Performance: 25/09/25

Subject Name: ADBMS

Subject Code: 23CSP-333

### **Performance Benchmarking: Normal View VS Materialized View (Medium Level)**

#### **1. Aim:**

- i. Create a large dataset
  - Create a table names `transaction_data` (id , value) with 1 million records.
  - take id 1 and 2, and for each id, generate 1 million records in value column
  - Use `Generate_series ()` and `random()` to populate the data.
- ii. Create a normal view and materialized view to for `sales_summary`, which includes `total_quantity_sold`, `total_sales`, and `total_orders` with aggregation.
- iii. Compare the performance and execution time of both.

#### **2. Objective:**

- Create a large dataset `transaction_data` with 1 million records for each id.
- Create a **normal view** and a **materialized view** to summarize sales (`total_orders`, `total_sales`, `avg_transaction`).
- Compare performance using `EXPLAIN ANALYZE`.

#### **3. DBMS script and output:**

```
CREATE TABLE transaction_data (  
  id INT,  
  value INT  
);
```

# DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
-- Insert random data for id = 1
INSERT INTO transaction_data (id, value)
SELECT 1, random() * 1000
FROM generate_series(1, 1000000);

-- Insert random data for id = 2
INSERT INTO transaction_data (id, value)
SELECT 2, random() * 1000
FROM generate_series(1, 1000000);

-- Show data
SELECT * FROM transaction_data;

-- Normal view
CREATE OR REPLACE VIEW sales_summary_view AS
SELECT
    id,
    COUNT(*) AS total_orders,
    SUM(value) AS total_sales,
    AVG(value) AS avg_transaction
FROM transaction_data
GROUP BY id;

-- Run normal view
EXPLAIN ANALYZE SELECT * FROM sales_summary_view;

-- Materialized view
CREATE MATERIALIZED VIEW sales_summary_mv AS
SELECT
    id,
    COUNT(*) AS total_orders,
    SUM(value) AS total_sales,
    AVG(value) AS avg_transaction
FROM transaction_data
GROUP BY id;

-- Run materialized view
EXPLAIN ANALYZE SELECT * FROM sales_summary_mv;

-- New table
CREATE TABLE random_tabl (
    id INT,
    val DECIMAL
);

-- Insert random values for id = 1
INSERT INTO random_tabl
SELECT 1, random()
```

# DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
FROM generate_series(1, 1000000);

-- Insert random values for id = 2
INSERT INTO random_tabl
SELECT 2, random()
FROM generate_series(1, 1000000);

-- Normal query
SELECT id, AVG(val), COUNT(*)
FROM random_tabl
GROUP BY id;

-- Materialized view for query
CREATE MATERIALIZED VIEW mv_random_tabl AS
SELECT id, AVG(val), COUNT(*)
FROM random_tabl
GROUP BY id;

-- Show materialized view
SELECT * FROM mv_random_tabl;

-- Refresh if data changes
REFRESH MATERIALIZED VIEW mv_random_tabl;
```

## 4. Output:

	QUERY PLAN	
	text	🔒
1	HashAggregate (cost=5.00..5.02 rows=2 width=52) (actual time=0.135..0.138 rows=2 loops=1)	
2	Group Key: transaction_data.id	
3	Batches: 1 Memory Usage: 24kB	
4	-> Seq Scan on transaction_data (cost=0.00..3.00 rows=200 width=8) (actual time=0.030..0.050 rows=200 loop=1)	
5	Planning Time: 0.168 ms	
6	Execution Time: 0.186 ms	

^ normal view performance

	QUERY PLAN	
	text	🔒
1	Seq Scan on sales_summary_mv (cost=0.00..20.20 rows=1020 width=52) (actual time=0.043..0.046 rows=2 loops=1)	
2	Planning Time: 0.169 ms	
3	Execution Time: 0.085 ms	

^ materialized view performance

Data Output Messages Notifications

Query returned successfully in 216 msec.

## Securing Data Access with Views and Role-Based Permissions (Hard Level)

### 1. Aim:

The company **TechMart Solutions** stores all sales transactions in a central database. A new reporting team has been formed to analyze sales but **they should not have direct access to the base tables** for security reasons.

The database administrator has decided to:

- i. Create **restricted views** to display only summarized, non-sensitive data.
- ii. Assign access to these views to specific users using **DCL commands** (GRANT, REVOKE).

### 2. Objective:

- To create **restricted views** that display only summarized, non-sensitive sales data for reporting.
- To use **DCL commands** (GRANT, REVOKE) for controlling user access to views.
- To ensure reporting users can only **view data** without direct access to base tables.

### 3. DBMS script and output:

```
-- 1. Create customer_master
CREATE TABLE customer_master (
  customer_id VARCHAR(5) PRIMARY KEY,
  full_name VARCHAR(50) NOT NULL,
  phone VARCHAR(15),
  email VARCHAR(50),
  city VARCHAR(30)
);
```

# DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING
